<input checked="" type="checkbox"/> I declare that the details of the dog described are accurate and relate to the dogs tested. <input checked="" type="checkbox"/> I hereby authorise release of the test results to the NZKC for publication on this dog's pedigree. <input checked="" type="checkbox"/> I give my consent for these results to be used for the purpose of statistical analysis and scientific research and for the statistical and scientific research to be published.	
Signature of owner: 	Date: 28 March 2017

Patellar Examination Results

1. Normal

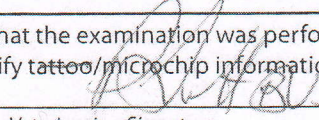

☒ right ☒ left

2. Patellar Luxation

☐ bilateral
☐ unilateral ☐ right ☐ left
☐ luxated ☐ medial ☐ lateral
☐ luxation is: ☐ intermittent ☐ permanent
☐ age of onset ☐ < 2 months ☐ 2-6 months
☐ 6-12 months ☐ > 12 months

3. Classification of luxation

☐ Grade 1 - The patella easily luxates manually at full extension of the stifle joint, but returns to the trochlea when released.
☐ Grade 2 - There is frequent patellar luxation which, in some cases becomes more or less permanent.
☐ Grade 3 - The patella is permanently luxated with torsion of the tibia and deviation of the tibial crest of between 30 degrees and 50 degrees from the cranial/caudal plane.
☐ Grade 4 - The tibia is medially twisted and the tibial crest may show further deviation medially with the result that it lies 50 degrees to 90 degrees from the cranial/caudal plane.

<input checked="" type="checkbox"/> I certify that the examination was performed according to the ABS procedure <input checked="" type="checkbox"/> I DID verify tattoo/microchip information on this dog		<input type="checkbox"/> I DID NOT verify tattoo/microchip information on this dog Date: (Date/Month/Year) 28 Mar 2017
