Application for Congenital Cardiac Database Please type or print legibly. To ensure accuracy blease enclose copy of the doo's registration basers

Previous application number (if any):		Registration number:			
legistered name:			Sex:	Colour:	
Schnauzinn Storm Chasel		rende	People & Salt		
Breed:		Date of Birth (dd/mm/yy)			
Miniature Schnauzer		02/03/2016			
D Humber (if any): Tattoo Microchip		Registration number of Sire:	Registration number of Dam:		
9900000000594439		03134-2011	02268-2012		
Owner Name:		Date of current examination (dd/mm/yy) 1			
Dayle Olding					
Co-owner Name:					
Mailing address:	in Road	201	47 Lone 5	treet

Veterinary Instruction	(Signature of owner)	ed. (see page 2)	d for the statistical analysis and scientific research to be put	(see page 2):	
Veterinary Instruction Clinical findings based on cardia Auscultation is within normal limit Auscultation reveals a soft (grade Auscultation reveals a moderate to Describe any cardiac mumurs: Timings: Systolic Depoint of maximal intensity: Mitral valve area	(Signature of owner) (Signature of owner)	ed. (see page 2) les not indicated.	Echocardiography if indicated Echocardiography with Doplor of normal. Echocardiography with Doplor mild congenital heart disease based on this study. Echocardiography with Doplor congenital heart disease. Describe any abnormal echocardiography with Doplor congenital heart disease. Describe any abnormal echocardiography with Doplor congenital heart disease. Describe any abnormal echocardiography with Doplor congenital heart disease. Describe any abnormal echocardiography with Doplor congenital heart disease. Pulse/continuous wave Summary evaluation and opi Normal cardiovascular exama Equivocal cardiovascular exama be diagnosed nor excluded Abnormal cardiovascular exama be diagnosed nor excluded Abnormal cardiovascular exama be diagnosed nor excluded Abnormal cardiovascular exama because of the congenital heart disease based on this study.	(see page 2): pler was performed and the results were within limit pler was performed and the results were equivocal: e cannot be conslusively diagnosed nor excluded pler was performed and the results were indicated o cardiogrphic or Doppler findings, including t velocities in m/sec. left apical/subcostal	
Veterinary Instruction Clinical findings based on cardia Auscultation is within normal limit Auscultation reveals a soft (grade Auscultation reveals a moderate to the control of the con	(Signature of owner) ONS ac auscultation is require its. Additional diagnostic stud 1 or grade 2) murmur at rest. To loud heart murmur. Diastolic Continuous Cortic or subaortic area Ticuspid valve area	ed. (see page 2) les not indicated.	Echocardiography if indicated Echocardiography with Dople of normal. Echocardiography with Dople mild congenital heart disease based on this study. Echocardiography with Dople congenital heart disease. Describe any abnormal echocardiography with Dople congenital heart disease. Describe any abnormal echocardiography with Dople congenital heart disease. Describe any abnormal echocardiography with Dople congenital heart disease. Pulse/continuous wave Summary evaluation and opinal Normal cardiovascular exame Equivocal cardiovascular exame Equivocal cardiovascular exame Landicate diagnosis below: The ABS procedure which should a DID NOT verify tattoo/microchip	(see page 2): pler was performed and the results were within limit pler was performed and the results were equivocal: e cannot be conslusively diagnosed nor excluded pler was performed and the results were indicated o cardiogrphic or Doppler findings, including t velocities in m/sec. left apical/subcostal mion of the examiner: sination - congenital heart disease is not evident amination - congenital hear disease cannot estatus uncertain for breeding amination indicative of congenital heart disease; CCOMPANY this certificate	
Veterinary Instruction Clinical findings based on cardia Auscultation is within normal limit Auscultation reveals a soft (grade Auscultation reveals a moderate to the control of the con	(Signature of owner) (Signature of owner)	ed. (see page 2) les not indicated.	Echocardiography if indicated Echocardiography with Doplor of normal. Echocardiography with Doplor mild congenital heart disease based on this study. Echocardiography with Doplor congenital heart disease. Describe any abnormal echocatransvalvular or other pertinent Pulse/continuous wave Summary evaluation and opinormal cardiovascular exame Equivocal cardiovascular exame Equivocal cardiovascular exame Equivocal cardiovascular exame indicate diagnosis below:	(see page 2): pler was performed and the results were within limit pler was performed and the results were equivocal: e cannot be conslusively diagnosed nor excluded pler was performed and the results were indicated o cardiogrphic or Doppler findings, including t velocities in m/sec. left apical/subcostal mion of the examiner: sination - congenital heart disease is not evident amination - congenital hear disease cannot estatus uncertain for breeding amination indicative of congenital heart disease; CCOMPANY this certificate	
Veterinary Instruction Clinical findings based on cardia Auscultation is within normal limic Auscultation reveals a soft (grade Auscultation reveals a moderate to Describe any cardiac mumurs: Timings: Systolic Point of maximal intensity: Mitral valve area Pulmonary valve area Other location: Radiation or other characteristics Veterinarian Signal Fees: Fees for data base entry to Fees for data base entry to	(Signature of owner) Ons ac auscultation is require its. Additional diagnostic stud 1 or grade 2) murmur at rest. to loud heart murmur. Diastolic Continuou Nortic or subaortic area ricuspid valve area ination was performe rochip information of ture by NZKC	d according to the nation of t	Echocardiography if indicated Echocardiography with Dopolography	(see page 2): pler was performed and the results were within limit pler was performed and the results were equivocal: e cannot be conslusively diagnosed nor excluded pler was performed and the results were indicated o cardiogrphic or Doppler findings, including t velocities in m/sec. left apical/subcostal nion of the examiner: iniation - congenital heart disease is not evident amination - congenital heart disease cannot status uncertain for breeding amination indicative of congenital heart disease; ccompany this certificate information on this dog
