

PennHIP Report

Referring Veterinarian: Dr Roger Dunn
Email: clinic@warkworthvets.co.nz

Clinic Name: Warkworth Vets
Clinic Address: 18 Neville St.
 Warkworth, AUK 0910
Phone: (649) 425-8244
Fax:

Patient Information

Client: Woods, Woods
Patient Name: Arvon's From The Hearth
Reg. Name: ARVON'S FROM THE HEARTH
PennHIP Num: 112089
Species: Canine
Date of Birth: 22 Jul 2016
Sex: Male
Date of Study: 10 Oct 2017
Date of Report: 12 Oct 2017

Tattoo Num:
Patient ID: 125837A
Registration Num: 06428-2016
Microchip Num: 934000090081107
Breed: AKITA
Age: 15 months
Weight: 99.2 lbs/45 kgs
Date Submitted: 11 Oct 2017

Findings

Distraction Index (DI): Right DI = 0.62, Left DI = 0.50.

Osteoarthritis (OA): No radiographic evidence of OA for either hip.

Cavitation/Other Findings: There is some suspicion that cavitation may have occurred in this dog's right hip. However, due to film contrast, growth plate lucencies, or other variables, we can't be certain. Please take this uncertainty into consideration before making any irreversible decisions based solely on these Distraction Indices: for example, spaying, neutering, TPO (Triple Pelvic Osteotomy), JPS (Juvenile Pubic Symphysiodesis) or other hip surgical procedures. If the dog is NOT to be a potential breeding candidate, of course, spaying or castrating would be an appropriate measure.

Cavitation can falsely elevate the DI and unfairly rate the dog with looser hips. Please repeat when the dog is a year or older, or at the owner's convenience.

Interpretation

Distraction Index (DI): The laxity ranking is based on the hip with the greater laxity (larger DI). In this case the DI used is 0.62.

OA Risk Category: The DI is between 0.50 and 0.69. This patient is at moderate risk for hip OA.

Distraction Index Chart:
