GRADING
The grade given is based on the presence of a primary lesion (Ununited Ancondylar Process, Fragmented Coronoid Process, Osteochondritis or Incongruity) and/or the degree of arthritis in each joint. Arthritis, even in the absence of a primary lesion indicates elbow dysplasia is present. Overall grade ranges from 0 (free of arthritis) to 3 (severe arthritis or confirmed primary lesion). Please refer to the explanatory sheet entitled 'Interpretation of Grades' for a full explanation. This is available in the Public section of the New Zealand Veterinary Association website http://www.nzva.org.nz or your veterinarian. Statistics for each breed evaluated are printed from time to time in the New Zealand Kennel Gazette.
