N SNOWDEN MRCVS

YOUR REF : BLAIR, HUMPHREY

SAMPLE : Plain urine

SPECIES : CANINE

BREED : EBT

AGE : 1 Yrs

, 0 Mth

SEX : M

BIOCHEMISTRY REPORT

COPY

Urine Protein	28	mg/dl	
Urine Creatinine	227	mg/dl	
Protein Creatinine Ratio	0.12	:1	<1.0

The urine protein to creatinine (UPC) ratio attempts to quantify renal proteinuria having ruled out pre- and post renal causes and dysproteinaemias.

Interpretation of UPC ratio

UPC		SIGNIFICANCE
DOGS	CATS	
<0.2	<0.2	Non-proteinuric (NP)
0.2-0.5	0.2-0.4	Borderline proteinuric (BP)
>0.5	>0.4	Proteinuric (P)
>5.0	>5.0	Indicative of glomerular disease (glomerulonephritis/amyloidosis)
		Protein losing nephropathy
>12.0	>12.0	Severe glomerular disease, often associated with amyloidosis
