Patellar Examination Results

1. Normal

- ☐ right ☐ left

2. Patellar Luxation

- ☐ bilateral ☐ right ☐ left
☐ unilateral ☐ medial ☐ lateral
☐ luxated ☐ intermittent ☐ permanent
☐ luxation is: ☐ < 2 months ☐ 2-6 months
☐ age of onset ☐ 6-12 months ☐ > 12 months

3. Classification of luxation

- ☐ Grade 1 - The patella easily luxates manually at full extension of the stifle joint, but returns to the trochlea when released.
☐ Grade 2 - There is frequent patellar luxation which, in some cases becomes more or less permanent.
☐ Grade 3 - The patella is permanently luxated with torsion of the tibia and deviation of the tibial crest of between 30 degrees and 50 degrees from the cranial/caudal plane.
☐ Grade 4 - The tibia is medially twisted and the tibial crest may show further deviation medially with the result that it lies 50 degrees to 90 degrees from the cranial/caudal plane.

- ☐ I certify that the examination was performed according to the ABS procedure
☐ I DID verify tattoo/microchip information on this dog ☐ I DID NOT verify tattoo/microchip information on this dog

re: Enred Devils Spy (AM03139101)

sc: 960011000120023

I have today examined the above dog and found him
to be free of any signs of disease or physical abnormality
On chest auscultation there was no heart murmur present. 0/6

A handwritten signature in dark ink, appearing to read "J. Hulme".

JESSICA HULME BVMS MRCVS
